

## FEET OFF THE TUBE!

When you're pulling maintenance on your OH-58A chopper, keep your big brogans off the droop compensator control tube, P-L-E-A-S-E!

It's easy—sure 'nuff—to step on this tube when you're standing on the engine deck, but it's strictly no-go.

Any bend at all in the tube means it's gotta be replaced, and this hollow little item costs dollars and time.
